INTRODUCTION

FOR twenty-five years we have been engaged in the business of manufacturing and installing elevators. This book is intended to give an idea of the progress we have made and especially to show how in our new factory we have provided for a large output as well as for accuracy in details and economy in manufacture.

Anyone interested can study the details in the following pictures and find a systematic arrangement for the manufacture of every part which goes to make up an electric elevator. The ample receiving and shipping facilities, and the large stock of finished parts as well as raw material which we carry, are also shown in these pictures.

We make only electric elevators—we are specialists and give all our time and thought to this one product.

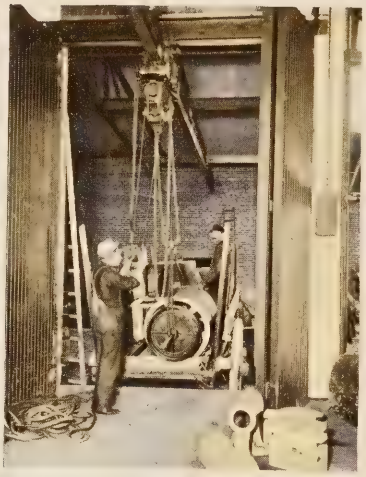
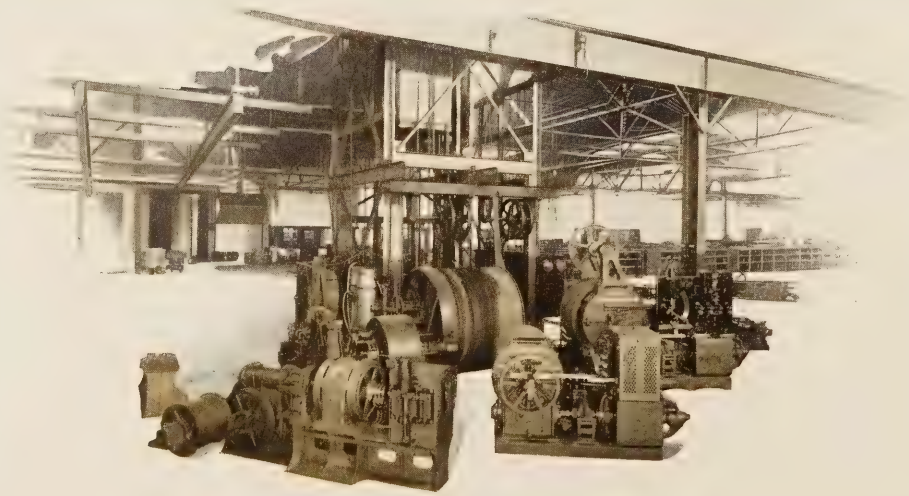
Building the cars



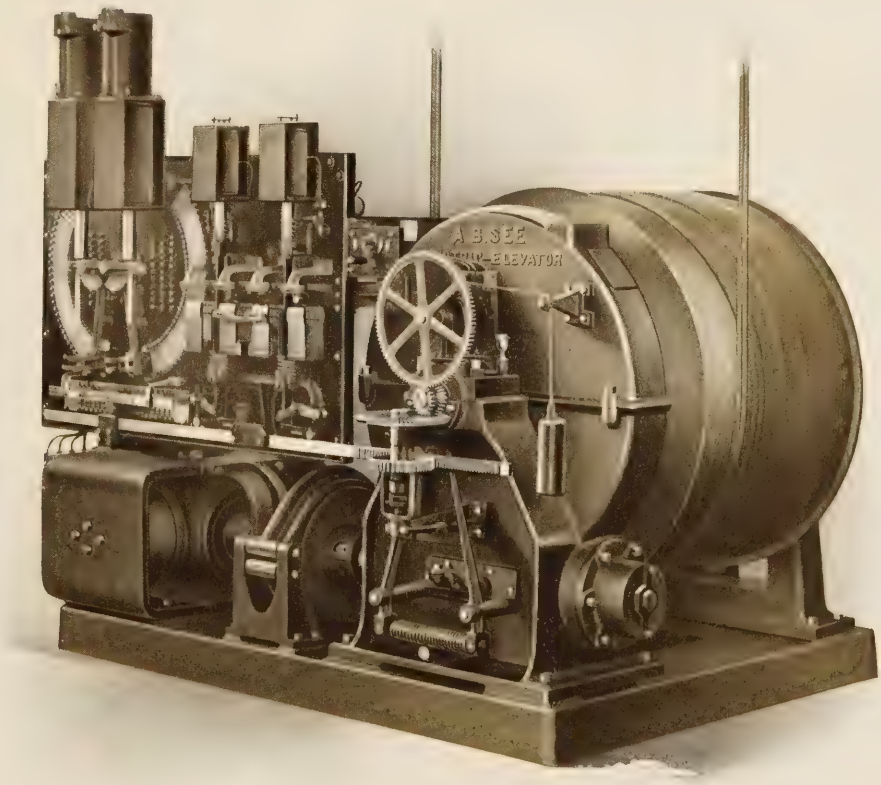
Loading elevators by an electric hoist

The assembled elevators are here tested



HIGH DUTY ELEVATORS

WE show on this page the worm gear machine which we build for high speeds. These elevators run smoothly and quietly, and are easily operated whether running rapidly or at a low speed.

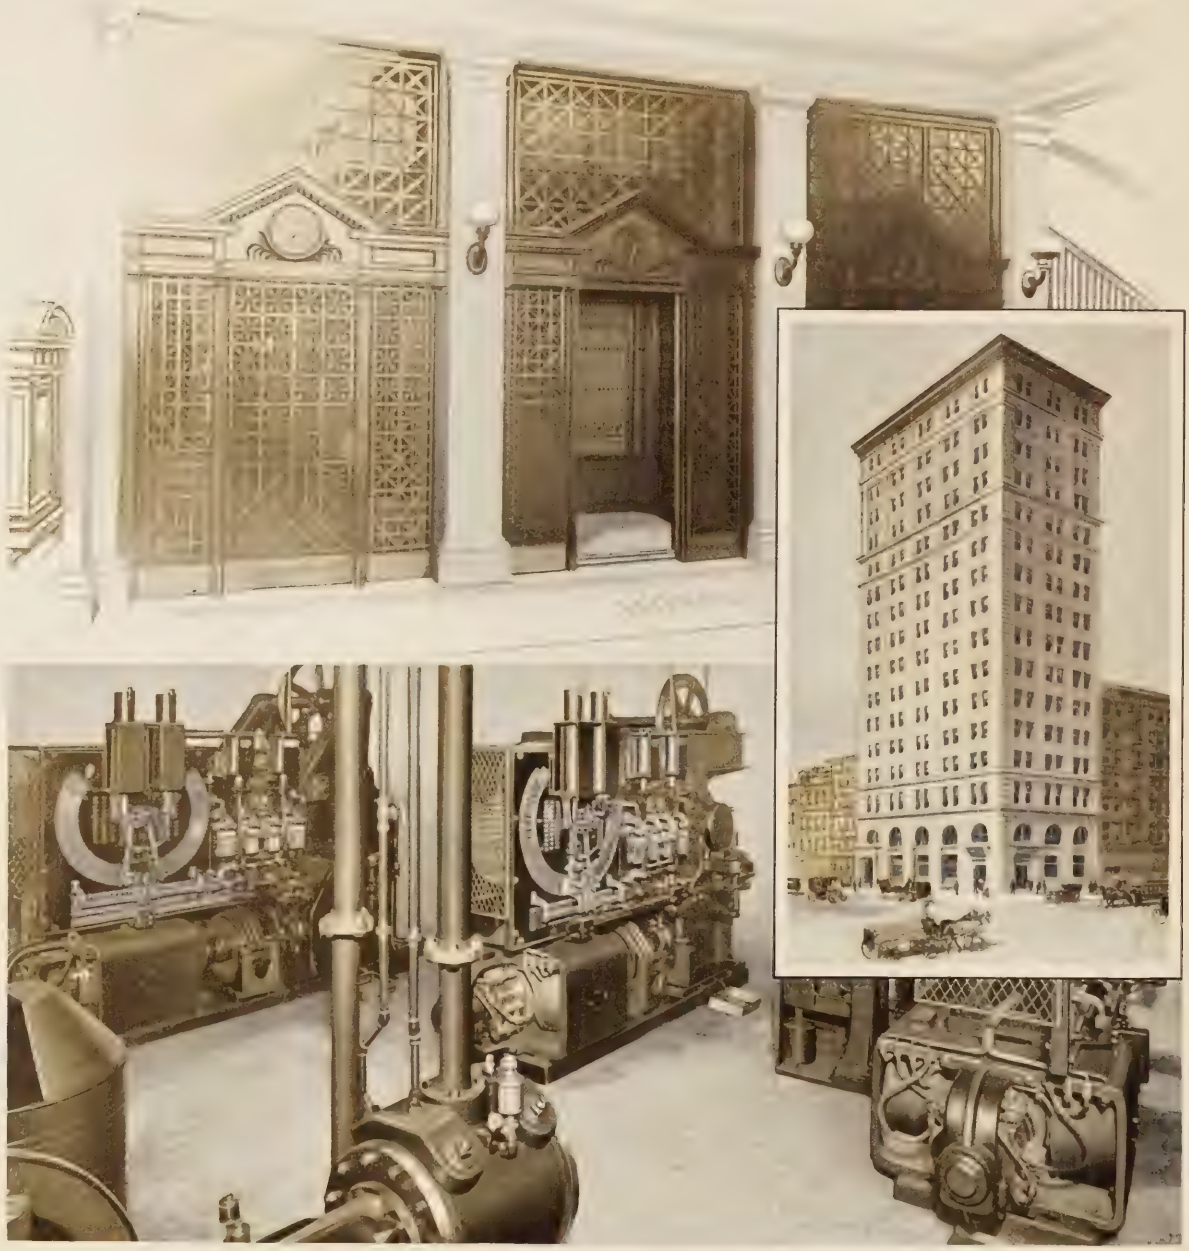


PUSH BUTTON *ELEVATORS for* MODERN·RESIDENCES

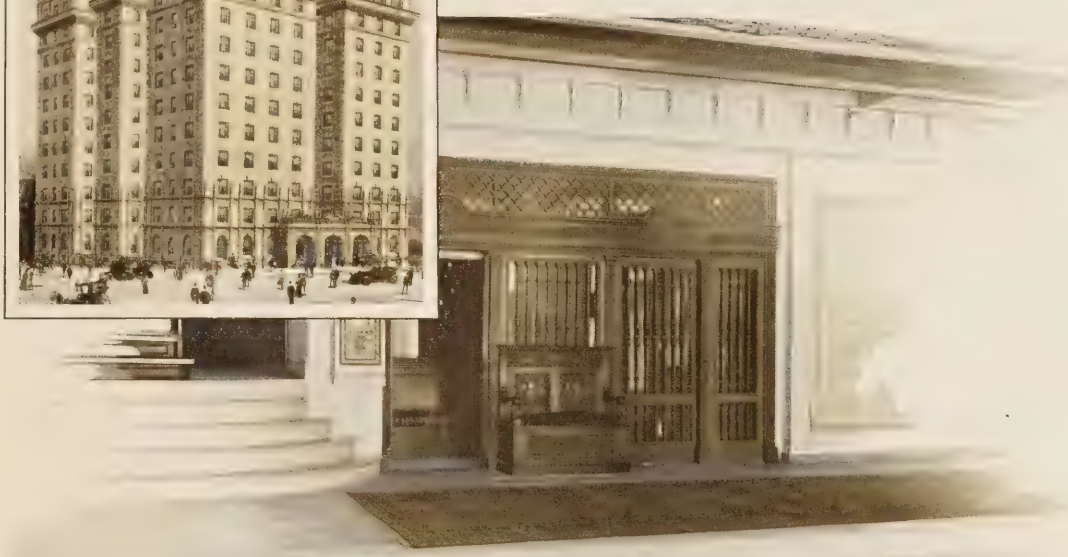
THE picture on the opposite page shows an elevator in the home. The elevator from which this picture is taken is run by the children as well as by the older members of the family.

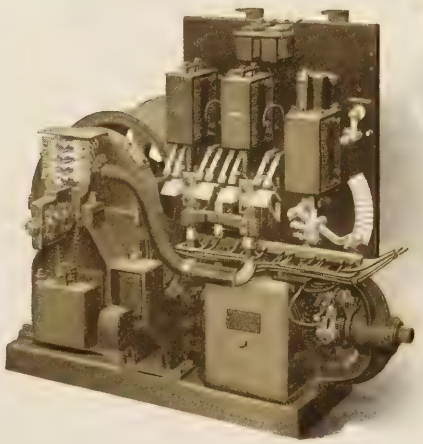
The usefulness of the residence elevator is found to be far beyond that which could be imagined until one has been installed. When an elevator is in the home, the dread of the stairs disappears and going from one floor to another is as easy as going from room to room.

The Residence Elevator
A child can run them

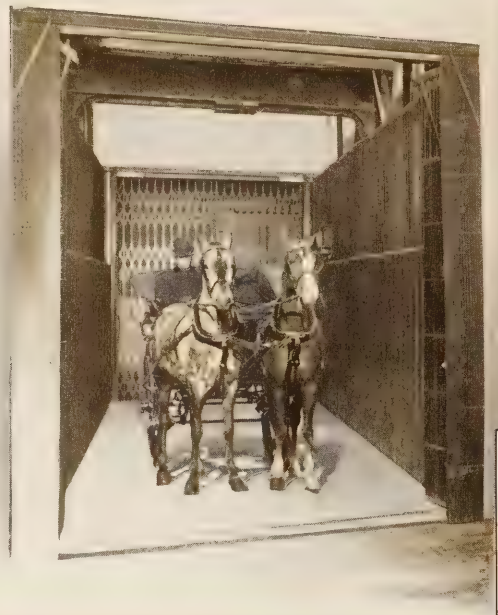


Royal Building

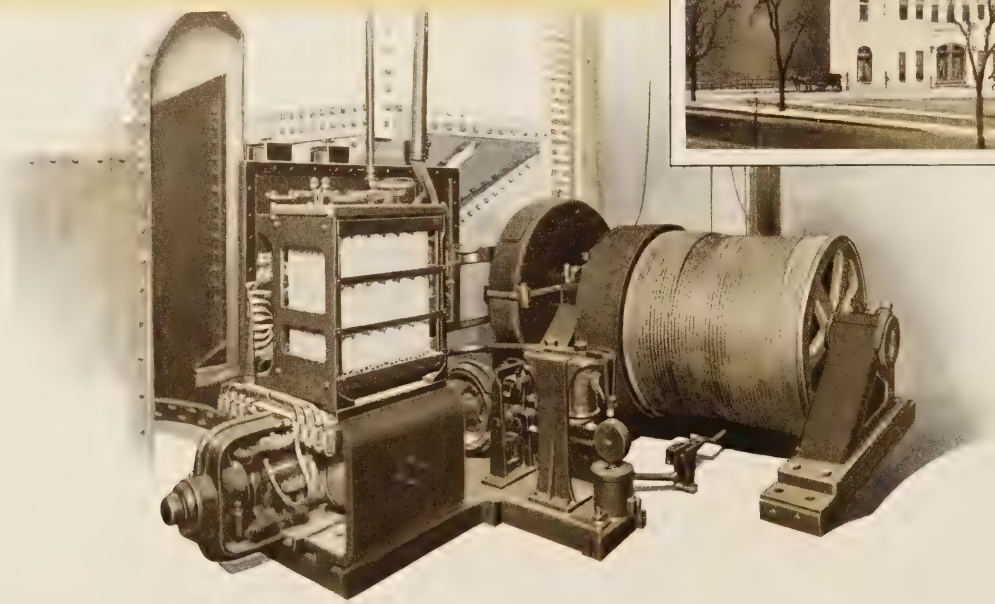


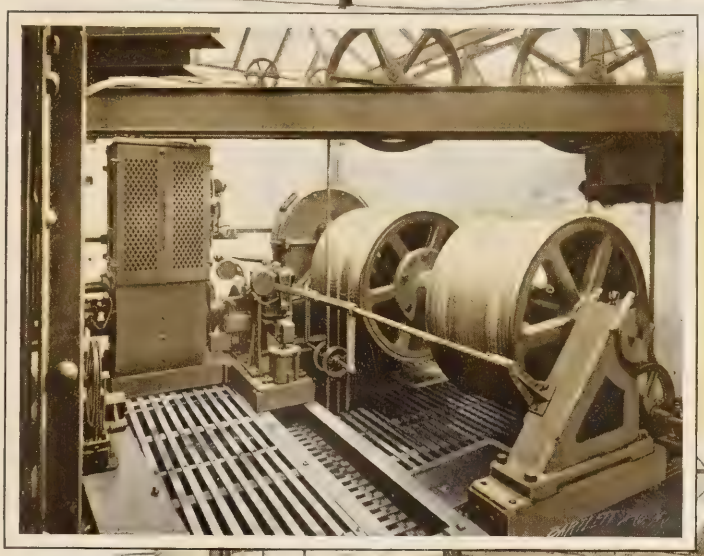


Wyoming
Apartment



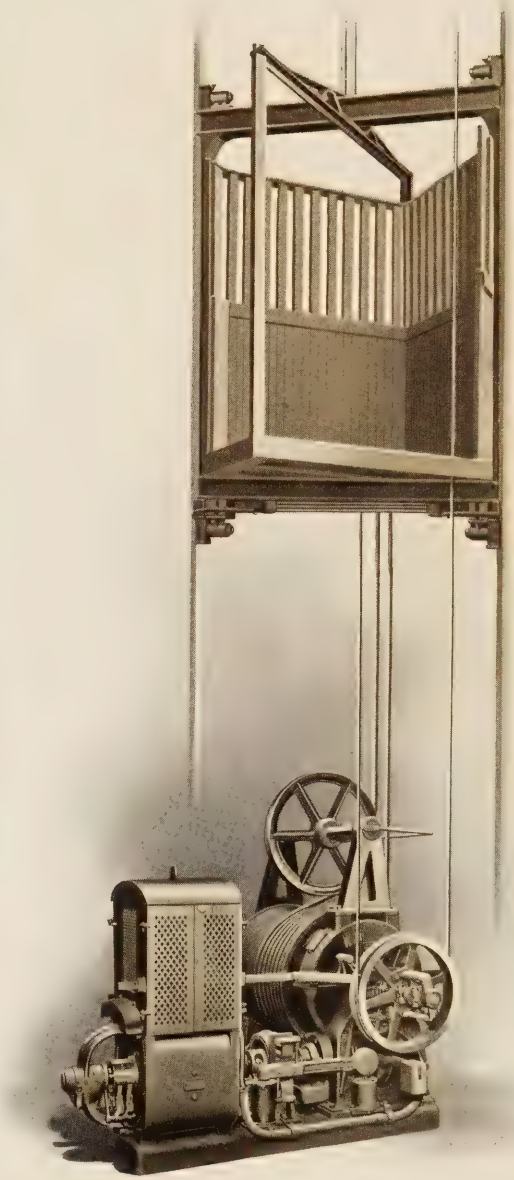
Tichenor-Grand Co. Building and Elevator



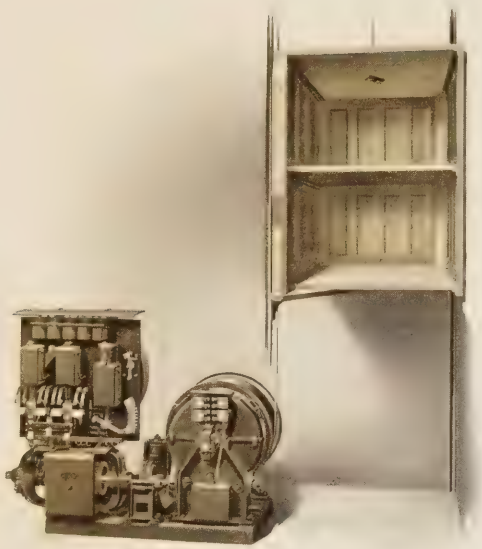


The hoisting machines are frequently placed above the elevator shaft as shown in this illustration.

Electric Control



Hand Rope Control



Dumbwaiters

These Dumbwaiters are arranged to save time and labor.

By merely pushing a button at the different landings the car can be dispatched to or called from any other landing.

Sidewalk Elevators

Sidewalk Elevators of extra strong construction, specially adapted to heavy work.
